## **Adrenaline Rush (2020) - IMDb**

An adrenaline rush occurs when your adrenal glands produce a lot of adrenaline. This rush can manifest due to stress or anxiety. Adrenaline is an adrenergic amine. These substances stimulate the sympathetic nervous system (SNS). Specifically, adrenaline is a catecholamine. The adrenal glands produce adrenaline and, when it's released, it can affect your entire body. This release isn't voluntary.

## **The Effects of an Adrenaline Rush - Exploring your mind**

Adrenaline, medically referred to as epinephrine, is a neurochemical released in response to stressful situations. An adrenaline rush can involve an increased heart rate, rapid breathing, and a spike in strength and energy. An adrenaline rush usually comes in response to a stressful situation but there are ways you can stimulate an adrenaline rush.

## **3 Ways to Get an Adrenaline Rush - wikiHow**

An adrenaline rush occurs during a fight-or-flight reaction, which involves the brain, nervous system and adrenal glands. The reaction prepares the body for a short-term burst of strenuous physical activity.

## **What Happens During an Adrenaline Rush? | Livestrong.com**

A person may experience a surge of adrenaline when he is in a fearful situation because adrenaline is the hormone that responds to danger (the "fight or flight" syndrome) as well as to stimulants (caffeine, amphetamines) and to low blood sugar. An adrenaline rush, or surge, prepares the individual to take action.
